

6th Annual
**Laser
Safety
Officers
Workshop**

LBLN, Berkeley,
CA, USA

July 27-29, 2010

The annual LSO Workshop is the premier meeting of its kind in the US. It features presentations on topics not found in standard laser safety training, and solutions to real-world laser safety issues by experts in the field. Hear about laser and laser-safety topics from leading experts and receive the most current data on what is happening in laser technology and how to integrate it into a safety culture.

This Workshop, open to all, is primarily for individuals with laser safety responsibility and interest, in a research, academic, or medical setting, who want to update and expand their knowledge. Anyone interested in laser safety issues will not want to miss this one-of-a-kind workshop (see agenda). It also serves as the official annual meeting of the US Department of Energy Laser Working Group.

Continuing Education Units have been applied for with ABIH, ASSE, CSP, HPS, AORN, & BLS.

Registration is \$75 US, payable through an LBNL secure website. Go to <http://www-afrc.lbl.gov/lsow/> for registration, agenda, housing information, etc
Registration will be limit to 130 attendees.

A Golden Year for Lasers

The laser turns 50 in 2010! Charles Townes, who shared the 1964 Nobel Prize in Physics for his seminal work in masers and lasers, is just one of the Workshop's scheduled speakers.

Mini-Workshops on Laser Safety Calculation Software

Are you using this software, or wondering if you should? We will have three breakout sessions (mini-workshops) where the pros and cons of the major commercial systems will be discussed by users and developers.
