

What is a “DOE site” for implementation of 10 CFR 835.405(e)?

- ◆ 10 CFR 835.405(e) states “Monitoring pursuant to 835.405(b) is not required for packages transported on a DOE site which have remained under the continuous observation and control of a DOE employee or a DOE contractor employee who is knowledgeable of and implements required exposure control measures.”
- ◆ **Question:** What is “DOE site” with regards to 835.405(e)?
- ◆ **Discussion:**
 - Most DOE sites are transected by public highways.
 - Is the rad material package on the DOE site, or off the DOE site, when it is being transported on a public highway that transects the DOE site?
 - Does the presence of the public highway, and transport of rad material packages over the public highway, negate the option of not performing receipt surveys if the requirements of 405(e) are met?
