

## BEVERLY A. COOK

Ms. Cook was appointed Manager of the DOE Idaho Operations Office in 1999 by Secretary Richardson. This office oversees the operations of the Idaho Engineering and Environmental Laboratory (INEEL), a multi-program laboratory conducting a broad range of environmental research and technology programs.

From 1998 to 1999, Ms. Cook served as the Principal Deputy Director of the Office of Nuclear Energy, Science and Technology (NE) in the DOE. This office oversees the Naval nuclear propulsion research and development program; the operation of DOE test and research reactors; and various research, environmental and facility management activities.

In 1990, Ms. Cook served as supervisor of the Plant Systems and Components Division of the Defense Nuclear Facilities Safety Board. Her duties included evaluating the safety basis of DOE nuclear facilities and assessing the adequacy of compliance to safety regulation and practices. From 1975 to 1989, she held a variety of technology staff and management positions with EG&G Idaho in the areas of commercial nuclear reactor design basis and severe accident research, including the Three Mile Island Accident Evaluation.

Ms. Cook holds a B.S. degree in Metallurgical Engineering from the University of Washington.
