Safety Design Integration

Instructors: Jerry Bueck NSTec/Omicron

Brad Evans NSTec/Omicron

Date/Time: Sunday, May 20, 2007 1:00 pm to 5:00 pm

Class Size: 20

Materials: None Specified

Course Description: Integration of safety into design has become a hot topic within DOE and the DNFSB. To address the underlying issues, DOE has agreed to prepare a new technical standard, DOE-STD-1189, *Integration of Safety into the Design Process*. This course presents highlights of that standard integrated with the standard project development process as defined by DOE O 413.3A, *Program and Project Management for the Acquisition of Capital Assets*. The course will provide the student with a fundamental understanding of both the project process (for development of nuclear facilities) and the safety analysis activities, products, and issues that support that process. Because DOE-STD-1189 is still under development and may not be issued prior to assembly of the course material, there may be differences in the final standard and the course material.
