Technical Safety Requirements

James A. McCormick, Washington Safety Management Solutions

Saturday, May 19, 2007

1:00 to 5:00 pm

The course will discuss the format and content of a technical safety requirements (TSR) document, including deriving Specific Administrative Controls, in accordance with the 10 CFR 830 Rule, Nuclear Safety Management; DOE Guide 423.1-1, Implementation Guide for Use in Developing Technical Safety Requirements; and the latest version of the DOE Standard on Specific Administrative Controls. The course will invite open-floor discussions and is designed to address general DOE TSR requirements as well as facility-specific situations. It is important that the majority of the participants have an understanding of their site-specific TSRs so that these situations can be addressed during this course.
